

FAST, CONTINUOUS  
UV-C AIR PURIFICATION

## Improving the Hospital Environment by Reducing the Bioburden

Hospitals are making the right decisions when it comes to preventing infections, but there is one area that is often overlooked. There is an **Invisible Threat** that travels throughout facilities, impacts patient care, employee retention and even creates financial risk. Options to combat this threat were limited; before **VIDASHIELD UV24**.

# JOIN LEADING HOSPITALS BATTLING THE INVISIBLE THREAT

The American Journal of Infection Control recently cited a study that detailed how airborne dispersion of pathogens can be rapid, widespread and difficult to prevent.<sup>1</sup> Hospital air can also be a potential route for transmission of pathogenic aerosols like Methicillin resistant *Staphylococcus aureus* and *C. difficile*.<sup>2,3</sup>

Leading hospitals are combatting contaminated air with a proven, patented UV-C air purification system uniquely designed inside a lighting fixture called **VIDASHIELD UV24**.

Housed in a shielded UV chamber in the ceiling and ideally located for maximum effectiveness, **VIDASHIELD UV24** continuously reduces harmful bacteria and fungi from treated air while improving air quality and minimizing odors.

## FILL THE GAP WITH CONTINUOUS CLEANING

Accepted protocols to address surface contamination are based on episodic cleaning and while hospitals are very diligent in their disinfection procedures, **the time between** and **the quality of cleaning** affects the risk. **VIDASHIELD UV24** effectively fills the gap created when terminal cleaning isn't an option. Protect patients and staff from **The Invisible Threat** posed by episodic cleaning.
